Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 10 July 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Information Disclosure Statement

1. No information disclosure statement was submitted.

Drawings

2. The drawings filed July 10, 2003 have been reviewed and are accepted as formal.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Torrey (US Patent 221,879) in view of Disbro (US Patent 2,230,744).

Torrey shows a pulley having a metal hub creating a bearing surface (b) and a metal rim (a) surrounding a ring (c), which is made from wood. The wooden ring has a groove on the outer periphery, the metal rim is cast around the wooden ring having a second groove which is aligned with the groove of the wooden ring.

Torrey does not show plastic as a material for the ring under the metal rim or a rolling element bearing as a rotation element.

Disbro teaches a pulley having a rolling element bearing (17) with an inner portion (18) rotatably received inside the outer portion (16). A plastic ring (21) is

mounted to the outer portion of the bearing. A metal ring (11) is positioned on the outer periphery of the plastic ring.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Torrey by adding a rolling element bearing to a pulley, as taught by Disbro. The motivation would have been reduced friction by using a rolling element bearing versus a bearing surface.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Torrey by using plastic as taught by Disbro in place of wood. The motivation would have been to relieve impact shock and reduce noise and vibration, as well as ease of fabrication.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

410,986 shows a pulley with a detachable rim.

191,981 shows a pulley with composite construction.
